

Bridge/Platform/Walkways/Floor & Slab Testing

Water Weights provides specialist products, services and project management for verifying the structural integrity of buildings, bridges, elevators, loading ramps, gangways and decks.

The WATER WEIGHTS[®] range of flexidams and flexitainers, allows uniform surface loadings to be applied.

- Advantages over traditional solid weights include ease of handling and positioning on site and very low carriage costs.
- Loading is measured by means of a calibrated flowmeter to give accuracy +/- 2% or better.
- By using our simple manifold arrangement several units can be filled simultaneously.
- Gradual application of load under test conditions is essential. This is more easily achieved using WATER WEIGHTS[®] water filled proof load bags than solid weights.

Product Report

Specific examples of applications include:

- roll-on, roll-off ferry ramps have been tested ranging from 70 to 700 tonnes.
- ballasting arrangements for ship's conversions up to 300 tonnes.
- general floor testing applications to verify structural integrity on renovation, change of use or suspected structural damage, e.g. 130 tonnes to an educational establishment and 40 tonnes to a historical monument.

WATER WEIGHTS® Bridge/Platform/Walkways/Floor & Slab/Testing Bags *Denotes enclosed bags

Capacity	1 ton*	2 ton*	5 ton*	8 ton*	16 ton*	20 ton	25 ton	35 ton	100 ton
